17.3 Release Notes

Bugfix

- Corrected a bug that attributed a lost to follow up status to patients who missed their appointment
- Improved performance of the patient status dashboard.
- New calculation method for the distribution of ARVs in community: now only the last prescription is considered. Percentage = Community ARV distribution / (sum: Community ARV distribution + ARV distribution in institutions)
- Henceforth, the home visit record no longer affects the status of LTFU patients.

New features

Download viral load results on iSante.

Only a user with super administrator or administrator privilege can download the viral load results on iSante.Figure.1

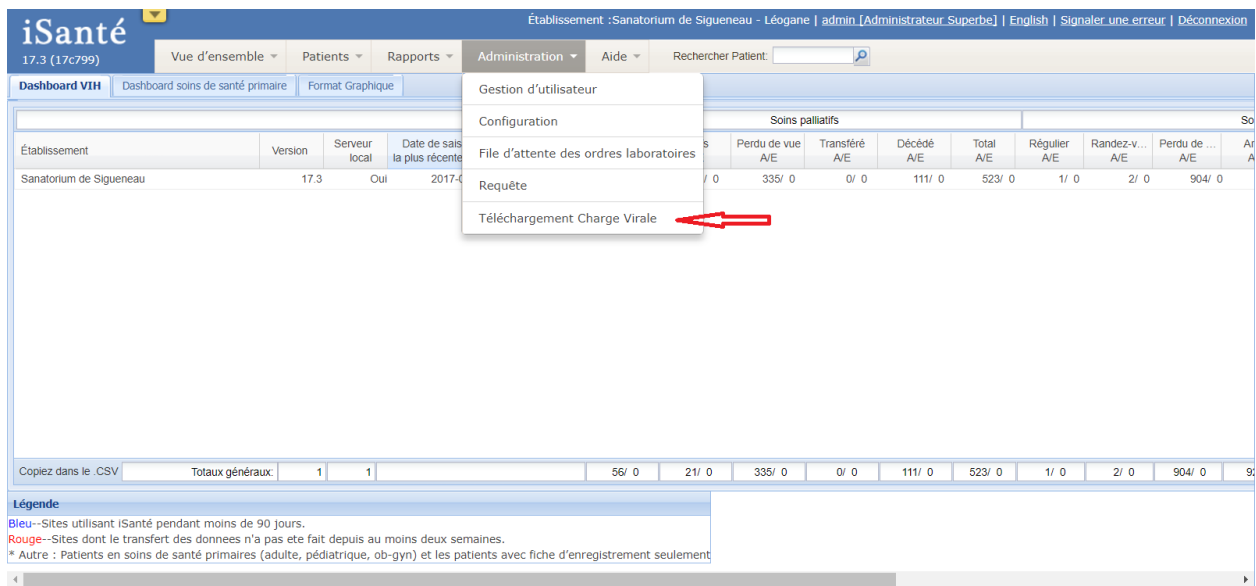

Figure 1

The user chooses the Excel file containing the results Figure2A, and click OK. A message appears to indicate the number of inserted results. The user can click the Show Errors button to get a list of uninserted results. Figure.2B
